

Alina Evidence-First Visual Report V1

A visual companion to the evidence draft: competitor universe, market sizing, whitespace, top-100 review, pricing, review language, forum coding, and product-core implications.

Metric	Value
Expanded competitor universe	12,552
Top-100 unique primary apps	90
High-threat unique competitors	45
Direct reference competitors	1
App Store IAP rows	498
Google Play successful lookups	247
Web paywall domains	70
Web screenshot queue	29
Forum quote-coding rows	72
ICP segment hypotheses	6

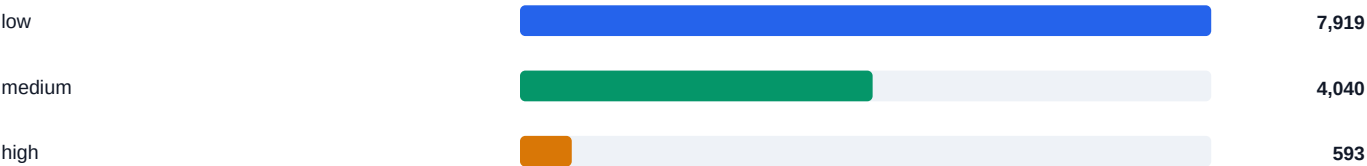

Evidence verdict: conditional go for continued validation. The strongest whitespace remains behavior-tied avatar or identity progression caused by a completed daily action.

1. Universe And Whitespace

Expanded Rows By Niche

Whitespace Bands

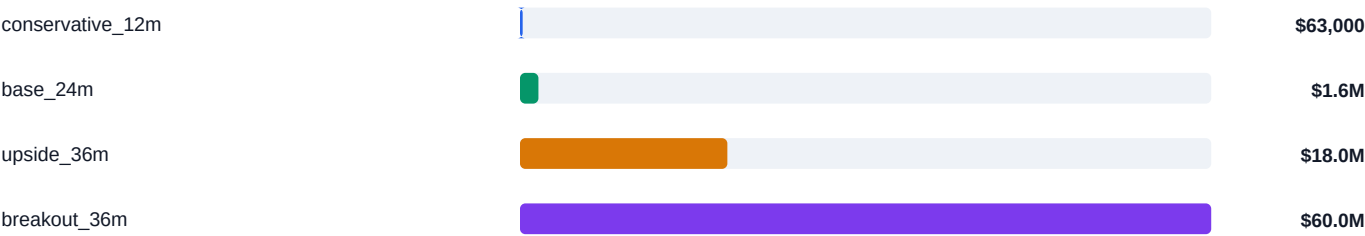

Broad whitespace is weak because the adjacent markets are crowded. Narrow whitespace is stronger because behavior-tied avatar progression appears rare in the top-100 metadata.

2. Market Model

SAM Base By Pillar

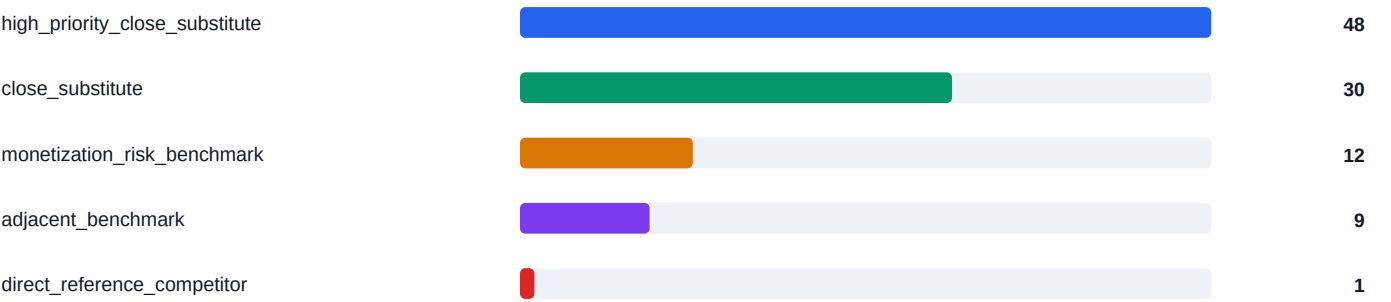

SOM Annual Revenue Scenarios

The model avoids adding five TAMs together. The direct intersection SAM is treated as a discounted overlap across adjacent markets.

3. Competitive Review

Top-100 Competitor Verdicts

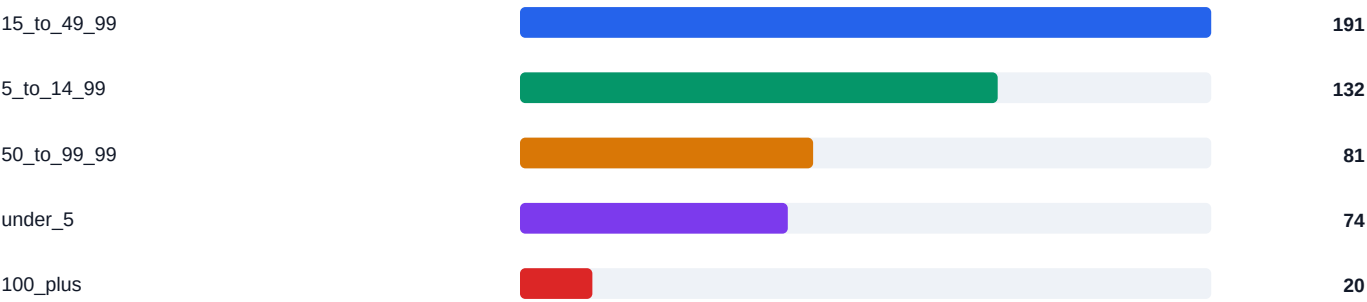

Rank	App	Threat	Verdict	Core	Behavior Progression
1	Shepherd: Spiritual Bible BFF	40.9	direct_reference_competitor	6	yes
80	Zing AI: Home & Gym Workouts	34	high_priority_close_substitute	5	no
73	Miracle Morning Routine	33.7	high_priority_close_substitute	5	no
100	Daily Yoga: Yoga for Fitness®	31.6	high_priority_close_substitute	5	no
31	Vida Health	31	high_priority_close_substitute	5	no
49	Daily Burn: Workout Coach	31	high_priority_close_substitute	5	no
63	EVOLVE: Transform Your Life	31	high_priority_close_substitute	5	no
84	Motivate: Daily Motivation	30.9	high_priority_close_substitute	5	no
53	Yoga International	30.8	high_priority_close_substitute	5	no
55	Unplug: Meditation	30.8	high_priority_close_substitute	5	no

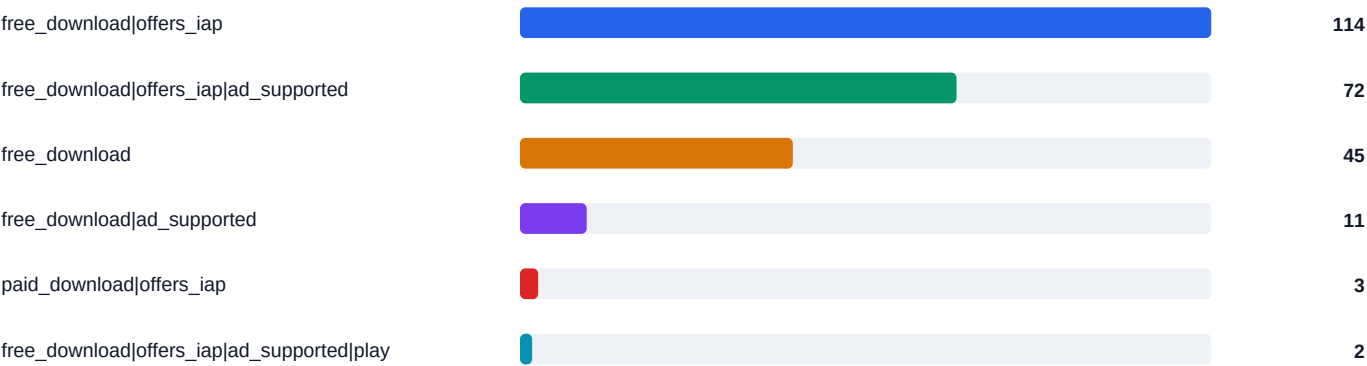

The scorecard finds many close substitutes but only one direct reference competitor under the strict behavior-tied progression rule.

4. Pricing Evidence

Observed App Store IAP Price Bands

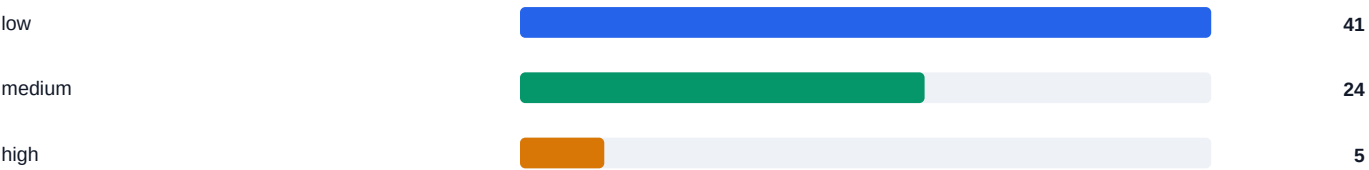

Google Play Pricing Models

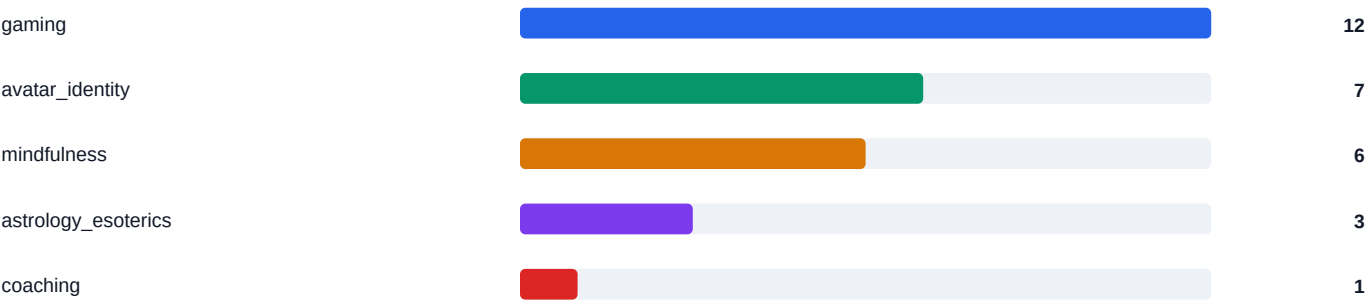

Pricing evidence supports free entry with paid depth as the dominant adjacent pattern. App Store exposes richer price ladders; Google Play validates IAP/ad-supported monetization at Android scale.

4B. Web Paywall Discovery

Developer Website Signal Strength

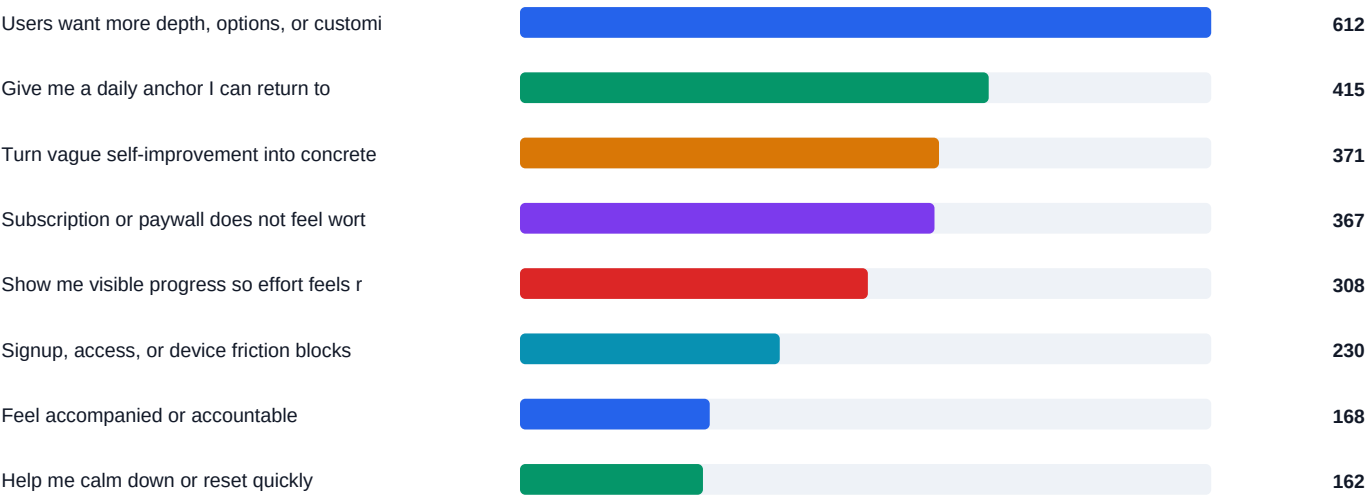

Screenshot Queue By Market

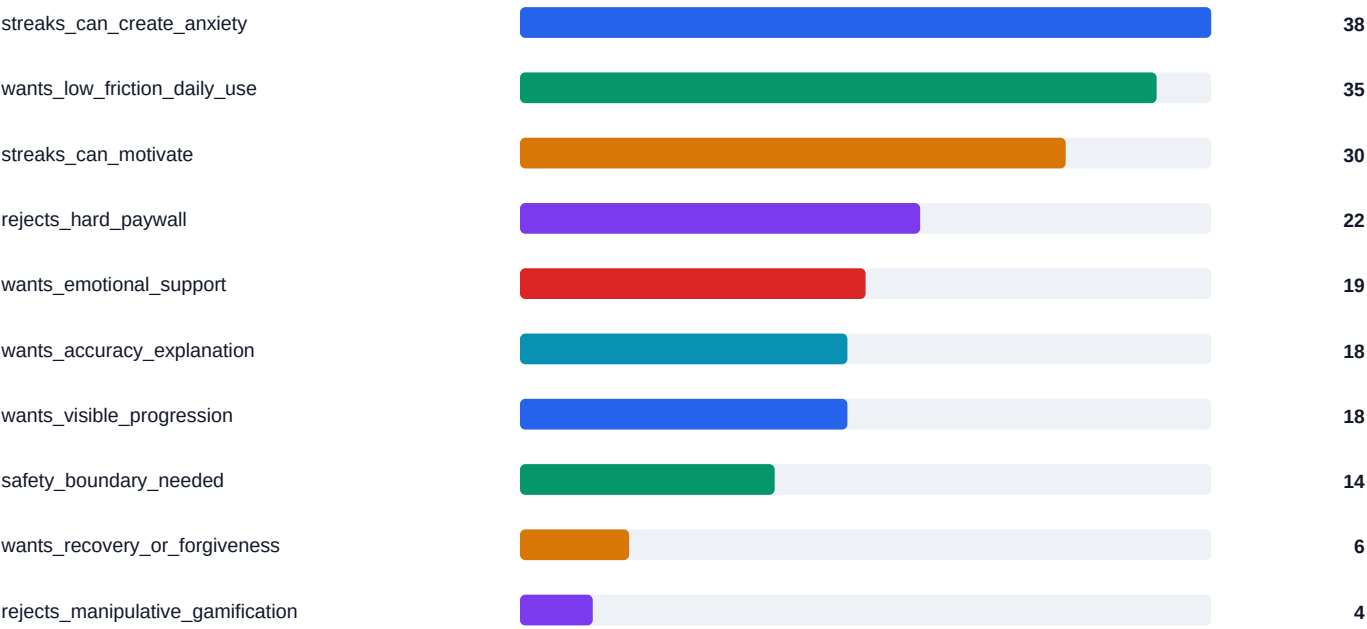

This page is a discovery layer from public developer websites, not final screenshot validation. High and medium rows should be manually captured and checked for trial terms, monthly or annual prices, and first meaningful paywall location.

5. Audience And Review Language

Top Review JTBD And Pain Clusters

Forum Quote Coding Tags

Review and forum language converge on a small daily anchor, concrete action, visible progress, subscription sensitivity, safety boundaries, and recovery from missed days.

5B. ICP Segment Hypotheses

ICP Segment Evidence Scores

Segment	Core Job	Validation Gate
Spiritual self-improvers	Turn symbolic/personal meaning into one grounded action today.	5 interviews or manual sessions show users trust the daily guidance enough to act on it.
Habit and progress users	Make vague growth concrete and keep momentum without streak anxiety.	Users prefer action-tied progress/identity feedback over a plain checklist or streak counter.
Anxious daily reset users	Calm down quickly and return to the day with one manageable next step.	Prototype users complete the reset without feeling gamified, pressured, or clinically generic.
Cozy/casual progression users	Return because progress feels gentle, visible, and emotionally rewarding.	Users read progression as self-growth feedback, not game chores or retention tricks.
Coaching professionals and structured growth users	Get structured guidance that turns intention into accountable practice.	Evidence separates consumer daily ritual use from B2B/career coaching demand.
Avatar identity builders	See a version of myself change as I make progress.	Manual inspection confirms avatar/identity products rarely make the visual self causally respond to a daily action.

These are directional hypotheses, not final personas. The next gate is to validate the top two segments with interviews, prototype response, return intent, and willingness-to-pay evidence.

6. Product Core And Next Validation

Product Core Element	Evidence Read
Personal meaning	Common across top-100 metadata and review language.
One daily action	Strongly supported by review/JTBD and habit-loop evidence.
Short reset	Supported, but must feel gentle and non-clinical.
Avatar or identity feedback	Common as a motif; rare when causally behavior-tied.
Visible progression	Strong motivation signal, but strict streaks create anxiety.
Next-day hook	Common retention pattern; needs forgiveness/recovery mechanics.

Remaining Validation	Why It Matters
Human validation of battlecards	Avoid overclaiming AI-assisted metadata review.
Web/paywall screenshot pass	Confirm actual trial terms and product packaging.
Prototype test of two-minute loop	Test whether avatar feedback makes action feel meaningful.
Safety/compliance framing	Reduce risk around astrology, AI guidance, and emotional support.
